# Mental health in Tech company

## About

The OSMI Mental Health in Tech Survey 2017 is a dataset that was collected to measure attitudes towards mental health in the tech workplace, as well as to examine the frequency of mental health disorders among tech workers. The survey was conducted to gauge how mental health is viewed within the tech industry and to identify the prevalence of certain mental health disorders among tech workers. The data collected in this survey will be used by the Open Sourcing Mental Illness team of volunteers to raise awareness and improve conditions for those with mental health disorders in the IT workplace.
